

Abstract of the Disclosure:

The assembly allows lines such as pipes, hoses, cables, or the like to be fastened to walls of structures, for instance the interior walls of sewers. The assembly has a duct for  
5 receiving the lines and it is formed with an opening on the side that faces the wall of the structure. The duct can be fixed to the wall with clevises that are fastenable to the wall at intervals in the longitudinal direction of the duct. The clevises surround the duct on the remaining sides, they  
10 are provided with protruding fastening flanges, and they are formed of two parts that can be pivoted and/or shifted relative to one another.
